The main content area is titled "Oracle Cloud Computing Center" and features an "invoke" button with a gear icon. The text describes Oracle's role in Grid Computing and its partnership with Amazon Web Services (AWS). A sidebar on the right highlights "Oracle OpenWorld Spotlight" and "Amazon Machine Images".

Oracle Cloud Computing Center

Oracle has played a pioneering role in making Grid Computing relevant to enterprises with ground breaking products such as Real Applications Cluster (RAC), Automatic Storage Management (ASM), and Storage Grid. More recently, Oracle has brought Grid Computing to middleware with the Application Grid approach to infrastructure. These products/technologies make the enterprise IT infrastructure elastic so that it can grow incrementally without any theoretical upper limit, as well as provide the flexibility to move resources around in order to meet dynamic business priorities.

Continuing its pioneering role in shaping enterprise computing, Oracle is pleased to introduce new offerings that allow enterprises to benefit from the developments taking place in the area of Cloud Computing. As a part of our initial offering, Oracle has partnered with [Amazon Web Services \(AWS\)](#) environment to offer the following products and services:

- Deploy Oracle Software in the Cloud
- Backup Oracle Database in the Cloud

These offerings may be extended to other Cloud platforms in the future.
