Getting Started: Oracle on Amazon EC2

**Pick an Oracle AMI**

Oracle has played a pioneering role in making Grid Computing relevant to enterprises with groundbreaking products such as Real Applications Cluster (RAC), Automatic Storage Management (ASM), and Storage Grid. More recently, Oracle has brought Grid Computing to middleware with the Application Grid approach to infrastructure. These products/technologies make the enterprise IT infrastructure elastic so that it can grow incrementally without any theoretical upper limit, as well as provide the flexibility to move resources around in order to meet dynamic business priorities.

Continuing its pioneering role in shaping enterprise computing, Oracle is pleased to introduce new offerings that allow enterprises to benefit from the developments taking place in the area of Cloud Computing. As a part of our initial offering, Oracle has partnered with Amazon Web Services (AWS) environment to offer the following products and services:

- Deploy Oracle Software in the Cloud
- Backup Oracle Database in the Cloud

These offerings may be extended to other Cloud platforms in the future.

Pick an Oracle AMI

Amazon Machine Images (AMIs)

Oracle Database 11g Release 1 Enterprise Edition - 32 Bit

This is an Oracle Corporation supplied and publicly available AMI that includes Oracle Enterprise Linux Release 5 Update 1 and Oracle Database 11g Release 1 Enterprise Edition - 32 Bit.

Submitted By: hodaskoracle
AMI ID: ami-cecb2fa7
AMI Manifest: oracle-corporation/database-ami/32-bit/oracle_11106_EE_32Bit-image.manifest.xml
License: Public

This AMI comes with Oracle Enterprise Linux Release 5 Update 1 and Oracle Database 11g Release 1 Enterprise Edition software pre-installed and configured on the 32 Bit platform. In a matter of minutes, you can have a fully configured Oracle Database computing environment running on Amazon EC2 that includes the web based management tool Enterprise Manager Database Control and the web based rapid development tool Applications Express (APEX). Getting Started: Oracle on Amazon EC2

Start a New EC2 Instance with Oracle AMI

- Configure EC2 firewall settings to open the required network ports (one time operation)
  - 1521 (listener), 8080 (APEX), 1158 (EM), etc.

  ```
  ec2-authorize default –p 1158
  ```

- Start up an EC2 Instance with Oracle AMI

  ```
  ec2-run-instances ami-cecb2fa7 –k <keypair>
  ```
Key Amazon EC2 Features

- Elastic (Static) IP Addresses
  - Pre-assigned static IP addresses that can be associated with any EC2 instance

- Elastic Block Storage
  - Persistent “NAS” style storage
  - Allows users to create volumes and snapshots
  - Default EC2 storage is ephemeral – you lose everything the moment you shut down an instance

- Availability Zones
  - Spread your instances across multiple locations for business continuity

- Security
  - Private/Public key pair based, SSH-only administrator access
  - Ability to configure firewall and network port settings

Performance and Scalability

OLTP Transactions

Small | Large | Extra Large

Near Linear Scalability

Amazon EC2 Instance Type
Maximizing Availability and Security

- Oracle Data Guard + Availability Zones = High Availability
  - Scale-out disaster recovery, business continuity, and read scalability
- Transparent Data Encryption
  - Encrypts data on disk without requiring application changes
- Network Encryption
  - Encrypts in-flight data
- Virtual Private Database
  - Users only see the data that they are authorized to see
Oracle Software Cloud Licensing

- Oracle software can now be licensed for the Cloud
  - Amazon EC2 supported today
- All editions of Database, Middleware, Grid Control
  - EE: Each virtual core counted as a physical x86 core (EE)
  - SE/SE1 license based on the EC2 instance size
    - 0-4 virtual cores = 1 processor (socket)
    - >4 virtual cores = each 4 virtual core counted as a processor (socket)
- Oracle Enterprise Linux
  - Each EC2 instance is counted as a “System”
- Can buy new licenses or use existing ones
- Customers with ULAs can use EC2 without any additional license
 Oracle on EC2 First Reactions

From the AWS Website Forums

“First class Database + linux available in 8 minutes!!. Don't you believe? Try this AMI and enjoy with APEX and is GUI for the administration. Specially amazing with EBS.”
